EMEDIONG JONAH

BACKEND ENGINEER | PYTHON · FASTAPI · NODE.JS · POSTGRESQL

Nigeria | jemediong591@gmail.com | LinkedIn | GitHub | Portfolio

PROFESSIONAL SUMMARY

Backend-focused software engineer building API-driven applications with Python/FastAPI and TypeScript/Node.js. Project and delivery experience includes REST APIs, relational data modelling, authentication and authorization, payment integrations, caching, background jobs, external API integration, and deployment automation. Works with PostgreSQL, SQLAlchemy, Redis, Docker, and automated tests, with an emphasis on maintainable services, data integrity, and secure workflows.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, SQL

Backend & APIs: FastAPI, SQLAlchemy, Node.js, Express.js, REST API design, Pydantic

Databases & jobs: PostgreSQL, MongoDB, Redis, ARQ, Alembic, relational schema design

Security: JWT, RBAC, session handling, CSRF protection, CORS, rate limiting

Integrations & infrastructure: Paystack APIs/webhooks, external HTTP APIs, Docker, Docker Compose, GitHub Actions, Render

Testing & frontend: pytest, Git, production debugging, React, responsive UI integration

SELECTED BACKEND PROJECTS

Job Application Agent

Python · FastAPI · PostgreSQL · Redis · ARQ · Docker

Private source repository available on request · Deployed application

- Developed a job-application workflow assistant with role-fit evaluation, listing review, application tracking, document generation, and explicit human-approval states.
- Organized discovery, matching, verification, document-generation, audit, and workflow modules, using PostgreSQL for durable records and Redis/ARQ for queued tasks.
- Built authenticated dashboard workflows with session handling, CSRF checks, rate-limited sign-in, and state-transition checks for consequential actions.
- Containerized the API, worker, PostgreSQL, and Redis with Docker Compose; configured GitHub Actions to run tests and build the production image.

DryCatch | E-commerce Platform

Python · FastAPI · SQLAlchemy · PostgreSQL · Redis · Paystack

- Built REST API endpoints for authentication, product catalogue, orders, and payments with request validation and centralized error handling.
- Designed transactional data models with PostgreSQL and SQLAlchemy; implemented JWT authentication and role-based access for user and administrative roles.
- Integrated Paystack webhooks for transaction verification and payment-state reconciliation, and added Redis-backed caching, cache invalidation, and rate limiting.

Insighta Labs | Demographic Intelligence API

Python · FastAPI · PostgreSQL · asyncpg · httpx · JWT

- Developed backend API capabilities for demographic profile data, filtering, sorting, pagination, and CSV export.
- Integrated external demographic APIs to enrich records with gender, age, and nationality estimates.
- Implemented authentication and authorization workflows documented for GitHub OAuth 2.0 with PKCE, JWT, refresh-token rotation, and role-based access control.
- Built rule-based natural-language query parsing to translate supported plain-English requests into database filters.

PROFESSIONAL EXPERIENCE

Backend Developer | Mebas Pro — PR Platform

TypeScript · Node.js · Express.js · MongoDB

- Designed backend API and data-model structure for a PR platform, including schema design and deployment responsibilities.
- Implemented a post lifecycle from draft through review to publication, with role-based controls over permitted state transitions.
- Refactored backend code and debugged application issues to improve maintainability.

Frontend Developer | PalKeeper — Contract
React · TypeScript · API integration

• Developed responsive React interfaces and reusable components, integrated frontend features with APIs, and resolved UI defects.

Web Developer | DLCF FUTIA
React · TypeScript · Express.js · MongoDB

• Built and maintained a full-stack web application supporting fellowship operations.

EDUCATION

Bachelor of Engineering (B.Eng.), Software Engineering — Federal University of Technology Ikot Abasi
